

GerryMandering Project User Guide
By: Vizeng Lee, Bijesh Bajrachar & Nong Xiong

1. Introduction

This user guide was created by Nong Xiong, Bijesh Bajrachar & Vizeng Lee for ICS 499 Capstone course. The idea of this project came from professor Ryan Hankins. The idea was if we could take the data and visually see redistricting problem. This guide will show you how to properly navigate and use the GerryMandering Project.

2. Objective

The objective of this project is to take the data from MN elections and visually show the redistricting problem to anyone who uses the application.

3. How To

User goes to our site to analyze the precinct results from different districts of Minnesota. There is an interactive map that the user can view. They are able to hover the mouse around certain district and it would display certain information about the districts with votes.

User may be able to use charts to view the data in different form if there is a demand for it.
