Meeting 1/30/2018

- Figured out creating database from the precinct data and linking it to phpmyAdmin.

Work on Requirements and design **(put in docs folder in github)**:
- **Requirements** is what customer wants to do.
- Describe what you are going to do in your project so that other can implement the same thing as others.
- **Design** that describes the entire system but does not explain the detail.
- Describe UI with use case with front end code
- Class diagrams would be helpful
- **Use case** describes how a user interact with the system but isn't enough for the design.

Next steps:
- Get the map running for Minnesota
- Figure out layering the geojson file into the map
